PES fabric, aluminum frame, stainless steel stoppers
Made in Europe 2021
order@boee.eu

Para is composed of three steam-bent fabric elements, each connected by a thin wire. The shape and appearance of the converging pleats can be individually altered, as the apex of each fold is adjustable through a steel stopper. By doing so, the mobile's character shifts from a precise angular geometry, towards an elastic, fan-like sculptural object.
